

Standard Head Frames

A.D.Coote offer an extensive range of standard and custom manufactured Head Frames to take a single Flood Light or Street Light up to Head Frame systems to take 25 or more fittings. We carry in stock a basic range as listed below that fit onto our standard 76mm spigot or can manufacture within a short time in our fabrication shop.

One of the leading causes for problems in column installations is incorrect attachments for light fittings and the easiest way to overcome this is to supply the correct fitting details when ordering a column or head frame. Information required includes spigot size, Fitting weight and size as well as mounting type or just give us the fitting manufacturer, name or part number and we will do a search.
