

## The Heritage

The Heritage is a column design that was developed to complement the existing columns in a suburb of Perth, Western Australia. After supplying several hundred for this project it was decided to add this column to our standard range. The Heritage is an off-spin of the successful Bordeaux range with an increase in base diameter and a double step down to give this column added character.

Available in both in-ground and base plate mounted and mounting heights of 3.5m, 4.5m and 6m. Other mounting heights can be accommodated if required as well as minor design changes to make the column more unique to a particular development.

They can be supplied with pipe curved or gooseneck single or double outreaches for different types of luminaries as well as a double head frame to take twin coach lamps pictured right. The Heritage columns are supplied powder coated in a wide selection of standard colours or a galvanised finish if required.

For more information on The Heritage contact our sales team or come in and have a look at our lighting column display area.

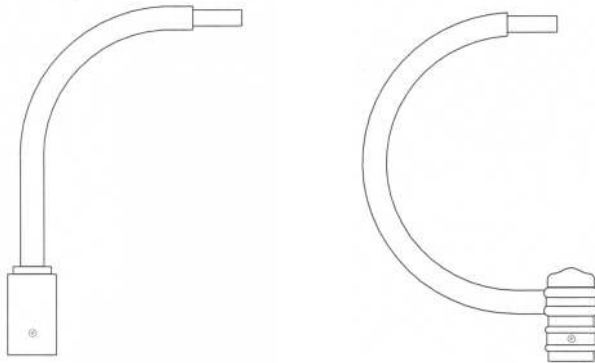

A.D.Coote & Company Pty. Ltd. offer a wide range of accessories and services including, but not limited to.

- Head Frames for single or multiple lighting arrangements
- Pipe outreaches and gooseneck fittings
- Rag Bolts and cages with recommended footing sizes
- Computer aided design facilities
- Assistance or organisation of installations
- Powder Coating or wet painting
- Delivery, including Hiab when prearranged (speak to our sales team)

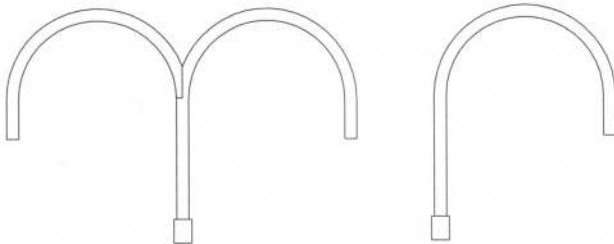

## The Heritage

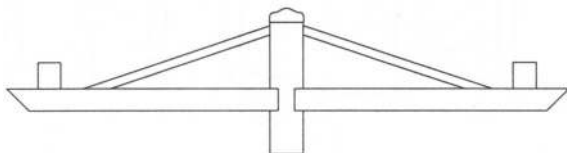

The standard Heritage has a 60mm diameter shaft and is suitable for a direct post top light fitting or can be adapted for any sort of outreach configuration of which some of our standard attachments are shown below.

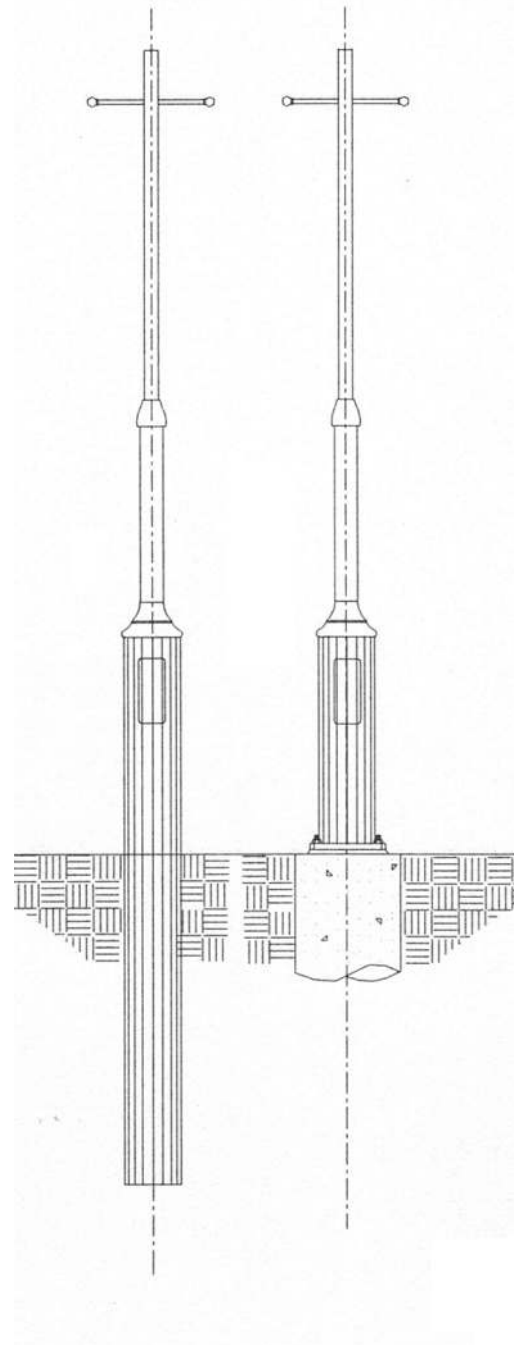

Left is the Avenue Bracket and right, the Nostalgia.

Double and single Gooseneck brackets are also another common choice to mount on the Heritage.

Our standard double head frame for twin Coach style lanterns for the Heritage column.
